

A “How to Think” Reset

BY DR. ROBERT FLOWER, GILCHRIST
INSTITUTE OF ACHIEVEMENT SCIENCES

If I Knew Then What I Know Now—how often have we heard this throughout our lives about any number of things? It fills one with a sense of loss, regret, longing and negativity. What I know is that I do not want to have those same feelings in the future when concerned for our children’s learning and education.

High School teachers tell us that many graduating students are not ready for college work; that high school seniors lack the academic soundness to succeed in an environment of higher learning. Data from the ACT College Readiness Report, states that only 64.2% of BA/BS students progressed from freshman to sophomore year in 2014.

Bridging the Gap—well now there is a program that presents proven formats for advancing educational achievement; The Exceptional Mind and Student Success. This program addresses educational issues and works to unlock the potentials that will help first-year college students navigate the transitional challenges at

Dr. Robert Flower

the end of their high school careers. The program leads participants to think on a different level, leading to success. It minimize the students’ restrictive patterns; the feelings that keep them from learning, by relating their instincts to virtues of achievement.

Intelligence can be expanded! This is done by approaching our current restrictive thinking patterns with a more objective focus. We have lost trust in our own internal, natural model; we need a “How to Think” reset!

The program has three phases; Reduction, this phase prepares a person to embrace a productive work ethic by identifying restrictors and replacing them with motivators; Re-

construction, recreates new awareness on Creative, Organizational, and Functional Intelligence; and Restoration, reshapes the approach to social realities.

For additional information or to request an excerpt from the workbook developed in connection with the program, contact press@Gilchristforum.com.
