The Discovery of the Holy Grail

The Holy Grail is a special genetic structure – A key cell with each of us.

It is representative of the notion that there exists a perfect physical “cell”, which in turn leads to a perfect entity--the Holy Blood concept. This cellular unit is biological and is developed according to certain principles of creation, organization and functionality. When human behavior follows these principles, with selfless intent, mastery ensues--sometimes enlightenment.

It is a visible, comprehensive method for defining the structure of Nature. It is a set of principles and systems we utilize every day.

What is the Holy Grail and what can it do for us?

The Holy Grail represents something we all want badly and is very difficult to achieve!

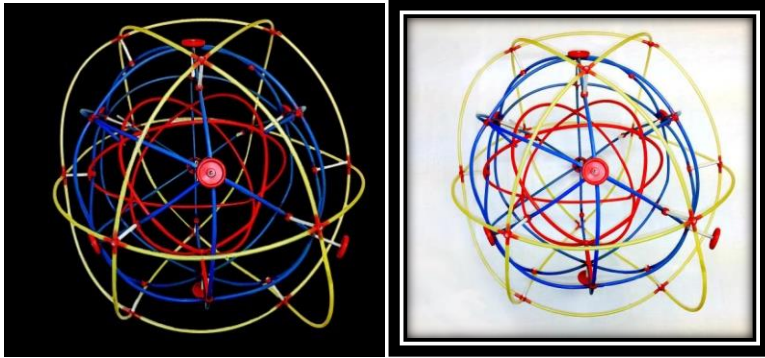

It is actually representative of a perfect bloodline; a genetics which fosters superior Creative, Organizational and Functional talents. It does this in all realms, physically, mentally, emotionally and spiritually intuitively.

The Holy Grail represents a segment of our genetics which enables incredible levels of potential development. It's inbred. This was found in our research of cellular development. It's what the scriptures and ancient sites are all trying to tell us. The Holy Grail calls out to each of us, “Follow me, Follow Nature!”

Since our discovery of the Holy Grail stems directly from biological principles of cellular development, we have successfully applied these principles to behavior, intelligence and potential development! Hence, we have captured the efficiency, effectiveness, truth and virtue of Nature and then applied that to the human psyche!

Historically, it is an ancient mystical mystery addressing the secrets of life, while in a grounded sense; it is a methodology for answering life's questions. It concerns things people want, but, are hard to achieve.

So, what is this “cell” and what about it? Well here is a picture of the Holy Grail “Cell.”

“Process of Cellular Development.”

This information was gleaned from the findings of a late friend and colleague, Dr. Derald Langham.

Dr. Derald G. Langham, a graduate of Cornell University and contemporary of Buckminster

Fuller, developed this cell concept. A brilliant geneticist working with plant cells, Langham discovered what he called the living geometry of a cell. His geometrical model was based on title-specific principles identified during the creation of a cell.

What Does It Do For Me? For Humankind?

It helps us to plan, organize and function at high levels. Also, it assists us in synthesizing and synchronizing information. On a universal scale, the principles and systems (P&S) reflect an order of Natural Law, because of their adherence to the physical sciences and its interpretation of human behavior.

Why and How Is This So?

Because the P&S are inherent in various physical sciences (such as biology and chemistry) they are non-referential (actually they are directional and instructional). They cannot be manipulated by human rules.

What About the Holy Grail and Leadership?

We refer you to 1Peter 2:7; “He who believes in it will not be disturbed. They (the leaders) have made falsehood their refuge and concealed themselves with deception.” “It is the stone which the builders rejected”. (Matthew 21:42, Mark 12:10, Luke 20:17, Acts 4:11, Psalms 118:22)

Is the Grail experience Cranial? Experiential? Intuitive? It’s all of that and more. After you understand it (which is relatively easy) and you start to experience it in your daily life, its intuitive Nature will be nurtured.

Historical and Mystical Background

The Philosophers Stone

Before we examine the Grail discovery, there is one further important background and discovery; we need to explain—the Philosopher’s Stone. The notion of “The Stone” first seems to emanate around 300BC. It was defined as an elixir of life—rejuvenation, immortality, enlightenment. Efforts to discover it have been known as Magnus Opus or the Great Works. It has been related to the Temple of Solomon and the rejected corner stone in biblical passages. The stone, also identified as the Lapis Elixir has been connected to the “stone which the builders rejected.” We see this quotation numerous times in the Bible, namely, Matt 21:42, Psalms 118:22, Mark 12:10, Luke 20:17, Acts 4:11 and 1 Peter 2:7. However it most notably stated in Isaiah 28:16; “He who believes in it will not be disturbed.” “They (the builders) have made falsehood their refuge and concealed themselves with deception.”

It has been stated that extracting the sword Excalibur from the Stone (cell) frees one from “death” and assures the individual of a Grail lineage and illumination. Our research has led us to believe while only the special bloodline accomplishes this feat, anyone has the ability to achieve illumination.

We have found a link from the stone to the Jewish tradition in the Book of Creation, which will be covered later. In Wolfram Von Eschenbacks writings we have found references connecting the stone to the Grail. Further, in 1 Peter 2:6, we see Jesus statement calling humans “Stones.”

Moreover, we considered the physical make up of “The Stone” and its alchemy symbology. It is composed of a circle, triangle and square. It squares the circle which in allegorical terms, equates to time and space connection. In order to find the Philosophers Stone, one needs to understand its geometrical meaning. This is another vital component in our discovery of the Philosophers Stone and the Grail. This is valid since the cellular development process of our Grail Cell is geometrically based. This is one other element of the Grail connection to the Philosopher’s Stone. We see how the stones roots of four elements trace to Plato’s works, such as his “Prima Materia,” Chaos and Laws.

Finally, it should be noted that the 13th century scientist and philosopher Albertus Magnus, discovered the Philosophers Stone and passed it on to his student, Thomas Aquinas. It is interesting to note that Aquinas’s, Summa Theological theme was “Follow Nature.” This theme was also the same basic theme of St. Augustine of Hippo, in City of God (De Civitate De)

A Sacred Bloodline - Genetics of the Grail

The very first notion of the Grail story actually occurs in the first book of the Old Testament-- Genesis. There are two indicators of a Holy Blood/ genetic line for humankind. The first is the genealogy of Adam and Eve through Abraham and further on to Jesus.

In Genesis 4:1-16, Cain kills his brother Able and God yells to him, “What have you done (to my creation), I hear his blood calling out to me from the earth.”

Genesis is literally the origin, the beginning. Given the above parables, as well as numerous others, such as in the second Book of Kings, leading up to the New Testament, we find a Genetic basis for an understanding of the Holy Grail—“A sacred “blood line.”

In fact in the old French, the Holy Grail was called “San Grail,” or Royal Blood.

We move forward to the twelfth and thirteenth century to the popularization of the Grail saga. Robert De Baron wrote of the story of Joseph of Arimathea and how he captured the blood of Jesus at the crucifixion in a chalice. Chretien de Troyes (1180 AD) wrote of the Grail as a wafer, like manna --a substance of healing. I have learned how to actually produce this from the earth further leading to the biological basis of the Grail. De Baron also stated that, “Maidens are appointed to care for the Grail.” The statement is a cosmic code reference to the nurturing of the Grail Cell for its embryonic development.

Wolfram Von Eschenback identified the Grail as a, “stone from heaven,” which produced enlightenment and further stated it was neutral, without preference. We shall see shortly how this stone matches with the Philosophers Stone and our discovery. Stone in the biblical sense equates to “cell.”

One ancient interpretation of the Grail was Old Catalon Gresal, which translates to, “a cup of earth, wood, metal, or a mixture of elements”--further factors reflecting nature. Another is Latin, Grandalis or Greek, Krater, which means, “a mixing vessel,” conceivably, utilized for genetic development. Finally there is a “crates” derivative of Latin Gradus meaning, “By degrees, by stages,” a process of genetic development. We will see some evidence of this later within the Cabala.

Dr. Robert Flower is founder and director of the Gilchrist Institute for Achievement Sciences, a sociopolitical/economic think tank established in 1982, Doctor Robert Flower discovered the Laws of Potential, which are based upon nature as a systems model. This led to the fundamental principles of multidimensional thinking.

Robert J. Flower, Ph.D., Director, The Gilchrist Institute for the Achievement Sciences.
